

Dexxter™ Screws for Trex® Transcend® Decking

Dexxter™ screws for composite decking are available in colors specifically formulated to match popular colors in the Trex Transcend® decking and railing system. Deck builders now have the option of using color-matched coated carbon-steel or stainless-steel fasteners approved by Trex for installation into its popular Transcend decking boards. The features of the Dexxter screw make fastening composite deck boards easier with clean-looking results. The trim-pan head of the Dexxter screw reduces the mushroom effect common with traditional decking screws, leaving a smoother and less noticeable installation.

Features:

- Type-17 point easily pierces the thick PVC shell on Trex Transcend material for faster initial penetration and easier installation
- Unique thread form removes composite material exhaust while driving to reduce “mushrooming” in composite decking
- Smaller, cap-style head is less visible on the decking surface
- Head colors formulated to match the most popular Trex Transcend colors
- Driver bit(s) included in each package
- Offered in hand-drive versions as well as in collated strips for use with the Simpson Strong-Tie® Quik Drive® auto-feed screw driving system
- Approved fastener choice for Trex Transcend decking and railing system

Trex and Transcend are registered trademarks of the Trex company.

These coated fasteners possess a level of corrosion resistance that makes them suitable for use in some exterior and corrosive environments and with some preservative-treated woods. For applications in higher-exposure applications, consider type-300 series stainless-steel fasteners for superior corrosion resistance. See www.strong.com/info for additional important information before selecting a fastener for a specific application.
