

How To Order Roller Shades

Measuring

Determine where the brackets are to be installed (inside or outside of frame). Examine your window and immediate area for obstructions that would interfere with installation or operation including; bracket installation (wood, metal, plaster block, etc.), drapery or shade hardware, cranks posts, lights, signs, etc.

When using a retractable metal tape, do not bend at a 90° angle then read. Keep it flat. Do not use cloth tapes or yard sticks. Measure width at top where brackets are to be installed. For inside mounts, take measurement at top, middle and bottom and use the smallest measurement. Measure each window even though they may all appear to be the same. (cut down cost is \$20 plus freight).

Ordering

WIDTH

INSIDE MOUNT – Measure the exact opening size. We will make the shade $\frac{1}{8}$ " smaller. Do not make that deduction yourself.

OUTSIDE MOUNT – Give the exact measurement of finished shade. A 1" to 2" overlap is recommended on each side of the window opening.

Using the measurement from your Inside or Outside Mount, select the Width of each shade. The first drop down list shows whole numbers, the second drop down list allows for fractions in $\frac{1}{8}$ " increments. Always round down to the nearest $\frac{1}{8}$ ".

HEIGHT

Actual window height or shade drop length must be accurate. We will add for required fabric safety wrap around the steel roller, based on the height supplied. As with Width, the first drop down list is whole numbers and the 2nd if for $\frac{1}{8}$ " fractional increments.

COLOR

Use the drop down list to select the color of the shade fabric.

MECHANISM

All Roller Shades come standard with a Chain Mechanism for raising and lowering the shade. You must select the color and location (left or right facing shade from inside) of the mechanism and chain from the drop down lists. The standard chain length is $\frac{1}{2}$ the size of the shade. For a small fee, you can extend that to be the full opening height. Select your Chain Length from the drop down list.

OPTIONS

Call us if you need something that is not listed on our website. Options include; shades larger or smaller than those sizes listed, Power Mechanisms for raising and lowering the shades, Top Treatment options for hiding the shade, Side Channels for covering any gap between the shade and window opening, Bottom Bar options and more.
