

## V-4 Panel Sliding Windows

### Frequently Asked Question

- 1. Do I have to frame my opening to fit “stock” window sizes?** No, every V-4 window is custom made to fit existing window openings without re-framing.
- 2. How do they mount?** The V-4 windows mount from the outside using the 7/8” mounting fin. They can be modified to mount from the inside, but are designed for outside mounting.
- 3. Are they Screened?** Yes. The screening is rolled directly into the outside of the aluminum window frame. If a screen were ever to tear, simply remove the spline, replace the screen and re-insert the spline.
- 4. Are there screen upgrade options?** Yes. The standard screen is fiberglass, like the typical house screen. Upgrades to Better-Vu, Pet Screen and Sun Screen are all available.
- 5. Are there parts that wear out?** No, each V-4 sash has a tension bar mounted to the outer edge, which allows you to place the windows in any location within the track.
- 6. I have a small opening next to my door and above my window. Will the V-4 Windows work there?** No. The minimum width is 24” and the minimum height is 30”. However, we do offer a lip mount storm window that can be made with memory vinyl for those smaller openings.
- 7. My openings are larger than the 60” maximum width. Do I have to insert framing into those openings?** No. When an opening is larger than 60”, we can build a “Twin” V-4 window. We take the full size of the opening and create 2 equal sized V-4 windows and attached them with a 2x2 aluminum mullion between them. The mullion will be attached to one of the windows and the other will be attached to it during installation.
- 8. My porch is really unique, can I send pictures and ask for your help?** Absolutely, in fact we wish we had pictures of every porch. Our e-mail address is shown above.
